

Formative Assessment
WIE3004 WIE2005 INFORMATION RETRIEVAL
Group Project (20%)
SEMESTER 2, 2024/2025
(Instructor: Assoc. Prof. Ts. Dr. Sri Devi Ravana)

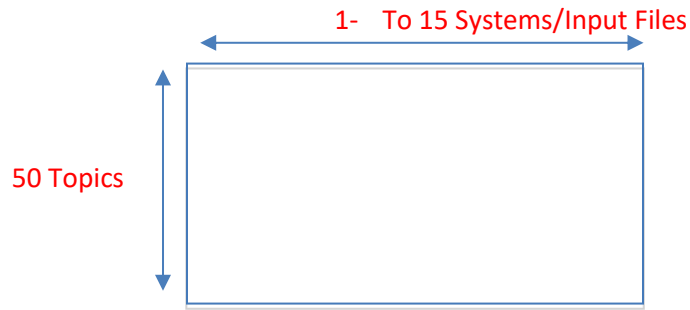

Group Project Report
(Given Week 6 and submission Week 13)

Topic on IR EVALUATION (Marks: 20%)

Instructions:

1. Students will be given a set of files (containing about 10 to 15 input files of system runs). A system run simulates the ranked documents of a search engine.
2. Using the **qrels files** (relevance judgments files) that can be downloaded from the TREC website <https://trec.nist.gov/data/t9.web.html> :
 - a. Students are required to compute the system/input files evaluation scores (also known as performance/effectiveness scores) using the metrics **precision@10** for a set of systems (per system-per topic scores).
 - b. Then, these per system-per topic scores should be averaged to compute the **overall precision@10** for each of the given system. Beside P@10, try with MAP too.
 - c. Finally, **both (i) correlation coefficient and (ii) significance testing** should be computed on these system scores.
 - d. **Correlation coefficient** is to compare how similar are the system performance rankings when two different metrics are used in evaluating systems eg. precision@10 vs. mean average precision (MAP)
 - e. **Significance testing** is done between pairs of systems/input files to assess if the difference is by chance or if the difference is significant.
3. Students are required to submit the below **in a written report**:
 - a. Scores of Precision@10 and MAP for the given systems (for each topic and also average over all topics) – **5%**

i. E.g. matrix of scores

b. Correlation coefficient values for system rankings - **5%**

c. Significance testing results ($p\text{-value} < 0.05$) between pairs of systems. How many pairs of systems are significantly different. - **5%**

NOTE: For computation of these scores above, a statistical package can be used called the R programming. It is open source. See <http://www.r-project.org/>. Or you may use any programming language/software.

4. Presentation Online – all members must be present. – 5%

Submission Link: In teams and spectrum.
